Bell-LaPadula

Terminology

Access rules

Example

Chinese Wall

Abstract Example

Access rules

2

- ▶ Coined in 1929 following the Wall Street crash
- ▶ Chinese Wall policies are already in use
  - ▶ Not necessarily digital
  - ▶ Can have authority of law
- ▶ Other terms, as some find the original offensive
  - ▶ "Screen", "firewall", "cone of silence", and "ethical wall"

3

Bell-LaPadula

Terminology

Access rules

Example

Chinese Wall

Abstract Example

Access rules

- ▶ Before 1989, most security policies were military
  - ▶ E.g. Bell-LaPadula (more about this later)
- ▶ Need of something that holds up in court
- ▶ Relevant anywhere conflicts of interest can exist

Access rules  
Example

### Chinese Wall

Abstract Example  
Access rules

4

- ▶ Proposed by Bell and LaPadula in 1973
- ▶ Security policy model
- ▶ Designed for military use

Access rules

Example

Chinese Wall

Abstract Example

Access rules

5

- ▶ **Security Label**
- ▶ **Object** – Data or program
  - ▶ **Classification** – Minimum security level
  - ▶ **Category** – Security group(s)
- ▶ **Subject** – Person or program
  - ▶ **Clearance** – Maximum security level
  - ▶ **Need-to-know** – Security group(s)

Bell-LaPadula

Terminology

Access rules

Example

Chinese Wall

Abstract Example

Access rules

6

**Simple security:** access is granted only if the subject's clearance is *greater* than the object's classification and the subject's need-to-know *includes* the object's category(ies)

**\*-property:** write access is granted only if the output object's classification is *greater* than the classification of all input objects, and its category *includes* the category(ies) of all input objects.

Abstract Example

Access rules

11

## Simple security

Access is only granted if the object requested

1. is in the *same company dataset* as an object already accessed by that subject, i.e. within the Wall, *or*
2. belongs to an *entirely different conflict of interest class*.

## \*-property

Write access is only permitted if

1. access is permitted by the simple security rule, and
2. no object can be read which is in a different company dataset to the one for which write access is requested and contains unsanitized information.
