Comparison with BLP

Clark and Wilson

Relevance today

Conclusion

2

- ▶ Coined in 1929 following the Wall Street crash
- ▶ Chinese Wall policies are already in use
 - ▶ Not necessarily digital
 - ▶ Can have authority of law
- ▶ Other terms, as some find the original offensive
 - ▶ "Screen", "firewall", "cone of silence", and "ethical wall"

Terminology

Access rules

Example

Chinese Wall

Abstract Example

Hierarchical Example

Access rules

Sanitization

Comparison with BLP

Clark and Wilson

Relevance today

Conclusion

- ▶ Before 1989, most security policies were military
 - ▶ E.g. Bell-LaPadula (more about this later)
- ▶ Need of something that holds up in court
- ▶ Relevant anywhere conflicts of interest can exist

CHINESE WALL

Sanitization

Comparison with BLP

Clark and Wilson

Relevance today

Conclusion

5

- ▶ **Security Label**
- ▶ **Object** – Data or program
 - ▶ **Classification** – Minimum security level
 - ▶ **Category** – Security group(s)
- ▶ **Subject** – Person or program
 - ▶ **Clearance** – Maximum security level
 - ▶ **Need-to-know** – Security group(s)

Sanitization
Comparison with BLP
Clark and Wilson

Relevance today

Conclusion

Simple security: access is granted only if the subject's clearance is *greater* than the object's classification and the subject's need-to-know *includes* the object's category(ies).

***-property:** write access is granted only if the output object's classification is *greater* than the classification of all input objects, and its category *includes* the category(ies) of all input objects.

Bell-LaPadula

Terminology
Access rules
Example

Chinese Wall

Abstract Example
Hierarchical Example
Access rules

Sanitization
Comparison with BLP
Clark and Wilson

Relevance today

Conclusion

12

Simple security

Access is only granted if the object requested

1. is in the *same company dataset* as an object already accessed by that subject, i.e. within the Wall, *or*
2. belongs to an *entirely different conflict of interest class*.

*-property

Write access is only permitted if

1. access is permitted by the simple security rule, and
2. no object can be read which is in a different company dataset to the one for which write access is requested and contains unsanitized information.

Christensen

Introduction

Background
Relevance

Bell-LaPadula

Terminology
Access rules
Example

Chinese Wall

Abstract Example
Hierarchical Example
Access rules

Sanitization

Comparison with BLP
Clark and Wilson

13

Relevance today

Conclusion

- ▶ Not all data within a company is sensitive
- ▶ It can be necessary to share data between users
- ▶ Assumed possible by de-privatizing
- ▶ Simply solved by adding extra CD within its own COIC

17

Comparison with BLP

CHINESE WALL

Mikael Elkjaer
Christensen

Introduction

Background
Relevance

Bell-LaPadula

Terminology
Access rules
Example

Chinese Wall

Abstract Example
Hierarchical Example
Access rules
Sanitization

Comparison with BLP

Clark and Wilson

Relevance today

Conclusion

- ▶ Important to show power of CW, compared to BLP
- ▶ Two important properties: mandatory and free choice
- ▶ It is possible to use BLP, but it cannot satisfy both properties
