# Introduction

## Decentralized Label Model

Mikael Elkjaer  
Christensen

1

### Introduction

- What it is not
- What it is
- How it differs

### DLM Basics

- Terminology
- Labels
- Key Principles

### Example

- Code Example

### Advanced

### Conclusion

- Future Works

The result of this paper is a model for controlling information flow: **Decentralized Label Model (DLM)**.

## Labels

### Decentralized Label Model

Mikael Elkjaer  
Christensen

#### Introduction

What it is not  
What it is  
How it differs

#### DLM Basics

Terminology  
Labels  
Key Principles

#### Example

Code Example

#### Advanced

#### Conclusion

Future Works

7

A label **L** is a set of owners, where each owner denotes its readers, e.g.:

$$\{o_1 : r_1, r_2; o_2 : r_2, r_3\}$$

where  $o_1, o_2, r_1, r_2, r_3$  are principals.

13

# DLM Basics

## Labels

### Decentralized Label Model

Mikael Elkjaer  
Christensen

#### Introduction

What it is not  
What it is  
How it differs

#### DLM Basics

Terminology  
Labels  
Key Principles

#### Example

Code Example

#### Advanced

#### Conclusion

Future Works

7

A label  $\mathbf{L}$  is a set of owners, where each owner denotes its readers, e.g.:

$$\{o_1 : r_1, r_2; o_2 : r_2, r_3\}$$

where  $o_1, o_2, r_1, r_2, r_3$  are principals.

The effective reader set of a label is the intersection of every reader, for  $\mathbf{L}$  it is  $\{r_2\}$ .

13

# DLM Basics

## Key Principles

### Decentralized Label Model

Mikael Elkiær  
Christensen

#### Introduction

What it is not  
What it is  
How it differs

#### DLM Basics

Terminology  
Labels  
**Key Principles**

#### Example

Code Example

#### Advanced

#### Conclusion

Future Works

- ▶ Labels are comparable:
  - ▶  $L_1 \subseteq L_2$  signifies that  $L_2$  is at least as restrictive as  $L_1$ .

8

13

# DLM Basics
